Overview Plugin Setup **Relationships** Licensing Settings (Advanced Custom Fields Pro) Posts and Post Types How To Create a Relationship How To Get The Relationship ID How To Link Posts Enable the Divi Builder for Custom Post Types How To Create a Single Post Layout List Layout Grid Layout How To Create Post Layout Author Layout **Book Layout Shortcodes** Linked Post Title **Summary**

Overview

CPT Relationships allows you to create bi-directional relationships between two different post types. All relationship types are supported:

- one to one relationships
- one to many relationships
- many to many relationships

Weather your creating a relationship between an author and books (one to many) or classes to students (many to many) CPT Relationships has you covered.

Once you have set up your relationships you can use the Divi modules provided by CPT-R to display your post relationships.

- **CPT-R Linked Posts** Allows you to display a list or grid of posts linked to the current post. The module allows you to apply a layout from the Divi Library to be used as the single layout for the posts being displayed.
- **CPT-R Related Posts** Allows you to display a list or grid of posts that have the same relationship as the current post. The module allows you to apply a layout from the Divi Library to be used as the single layout for the posts being displayed.
- **CPT-R Post Title** Allows you to display the linked posts title or the title of the current post. (this module works best for one to many relationships e.g. author to books)
- **CPT-R Featured Image** Allows you to display the linked posts featured image or the featured image for the current post. (this module works best for one to many relationships e.g. authors to books)
- **CPT-R Linked Post Meta -** Allows you to display a custom field from the linked post. (this module works best for one to many relationships e.g. authors to books)

Please note: The **DPR Post Meta** module will only be available if the **Advanced Custom Fields Module Plugin** by Tortoise IT is installed and activated.

CPT Relationships comes with Advanced Custom Fields Pro out of the box. This means you have all of the features and functionality within ACF Pro available to you. The reason ACF Pro is included is because it is used behind the scenes to manage the relationships created by CPT-R. If do not want to use ACF to create custom fields for your post types you can disable the menu option within CPT-R Settings.

Plugin Setup

Once the DPR plugin has been installed you will find a new admin menu item ('CPT-R') within the wp-admin section.

ာ့ထို CPT-R
Relationships
Create New
Settings
License

Relationships

The 'Relationships' section lists all of the post relationships you have created. This will be empty after installation.

Divi Post Relationships			
Settings saved.			Ø
Create Relationship			
Manage Post Relationships			
Name	Relationship	Relationship Id	

Licensing

The first thing to do once the plugin has been installed is enter the license key to enable updates. Select the licensing item within the CPT-R admin menu.

CPT Relationships - License Options										
Activate										
License Key		Enter your license key								
Save Changes										

Enter your license key and click save changes.

Settings (Advanced Custom Fields Pro)

You may have noticed that when the CPT-R Plugin was activated a second menu item was added to the admin menu for 'Advanced Custom Fields Pro' Management.

Advanced Custom Fields Pro comes with CPT Relationships out of the box. If you are not going to be using custom fields within your post types you can remove this item from the admin menu within the CPT-R settings section.

Posts and Post Types

For the purpose of this example I have already setup 2 post types called 'Authors' and 'Books'.

I have added 2 authors and 6 books (3 by each author).

Directors:

- George RR Martin
- J. K. Rowling

Movies:

- A Storm of Swords Part 1 (Director GM)
- A Clash of Kings (Director GM)
- A Game of Thrones (Director GM)
- Harry Potter and the Prisoner of Azkaban (Director JKR)
- Harry Potter and the Chamber of Secrets(Director JKR)
- Harry Potter and the Philosophers Stone (Director JKR)

We will be creating a relationship between authors and books so we can display the books by the author on the authors page as well as other books by the same author on the books page.

Please note: We will not be designing the pages to look pretty. This document is to demonstrate the features of CPT-R and avoid distractions away from the core functionality.

How To Create a Relationship

Within the create relationship subpage there are three options available:

- 1. Relationship name
- 2. Post type 1
- 3. Post type 2

Our relationship will be called 'Bookshop' and the post types we will be linking are 'Authors' and 'Books'

CPT Relationships - 0	Create New
Create Post Relationship	
Post Relationship Name	Bookshop
Post Type	Authors \$
Link to	Books +
Save Changes	

Please note: It does not matter which order you enter the post types as the relationship will be bi-directional (both ways).

How To Get The Relationship ID

You can find your newly created relationship id from within the relationships overview page.

С	PT Relationships Create Relationship			
	Manage Post Relationships			
	Name	Relationship	Relationship Id	
	Bookshop	Authors <-> Books	cptr_writer_book	Delete

The relationship id is used within shortcodes.

How To Link Posts

Now we our relationship setup we are able to start linking our posts. Navigate to your authors post types.

Dashboard Dashboar	Authors Add New
🖈 Posts	All (2) Published (2)
9; Media	Bulk Actions 💠 Apply All dates 💠 Filter
Pages	Title
Comments	George RR Martin
🖈 Projects	
🖈 Books	J. K. Rowling
🖈 Authors	Title ▲

Select one of the authors e.g. 'George RR Martin'

Within the post edit page you will find a new option enabling you to select to assign books to the author.

Select the books you would like to assign.

Enable D	ivi Builder On	Post Types			Page			Posts	Projects ENABLED	Authors ENABLED		
					Bool							

When editing posts you will now have the option to 'Use the Divi Builder'

How To Create a Single Post Layout

Before we jump into creating a layout for the posts we must create the single layouts for our linked and related posts. You can think of a single layouts as a layout that is used to display a post within a list or grid of posts.

George RR Martin

List Layout

Head over to the Divi Library and create a new layout called 'Book Single (List)' Create 2 columns $(\frac{1}{3} - \frac{2}{3})$

To add the posts featured image select 'CPT-R Featured Image' form within the Divi module selection.

When using the CPT-R Featured Image Module within a single layout you must enable 'Current Post Featured Image'. This is because CPT-R loops over the linked/ related posts and we would like to display the current featured image for the current post within the loop.

We will leave 'Hyperlink' enabled so we can view the book when clicked.

For the image size I have selected 'Medium' through this demo.

CPT-R Featured Image Module Settings							
Content	Design	Advanced					
Main Setting	gs						
Current Post Fe Image:	eature E s	YES					
Hyperlink Imag	ge:	YES Enable this option to turn the featured image into a hyperlink to the linked post.					
Image Size:	F	medium \blacklozenge					
Sa	ve & Add To Li	ibrary 🕒 Save & Exit					

Within column 2 add the 'CPT-R Post Title' Module '

Similar to the CPT-R Featured Image Module when using the CPT-R Post Title module within a single layout you must enable 'Current Post Title'. This is because CPT-R loops over the linked/ related posts and we would like to display the current post title for the current post within the loop.

Current Post Title:

Enable to this option to get the get the title for the current post. ***Enable this option for single layouts used within CPT-R Linked Posts and CPT-R Related Posts modules***

Save your Book Single (List) layout.

D	The Divi Builder				~
		CPT-R Featured Image	× = P	CPT-R Post Title	×
	Insert Module(s)		+ Insert Module(s)		
+ Stan	dard Section Fullwidth Section	Specialty Section Add From Libr	ary		

Grid Layout

Create another layout named Book single (Grid) Repeat the above steps using a single column layout instead of a two column layout.

D	The Divi Builder		~
=			
-		CPT-R Featured Image	×
		CPT-R Post Title	×
	X Insert Module(s)		
\times	+ Add Row		
+ Stan	ndard Section Fullwidth Section Spe	lalty Section Add From Library	

How To Create Post Layout

Author Layout

Now we have the Divi builder enabled for out post types and our single layouts created we are ready to start designing out post page layouts.

Within the Authors page click 'Use The Divi Builder'

You should see the following layout

For our authors layout we will be display the featured image, content and books.

Change the single column layout to a 3 column layout

0		+ Insert Module(s)		Text	×	Insert Module(s)
	ш ×		+ Insert Module(s)		
×	+ Add Ro	w				

To add the posts featured image by selecting 'CPT-R Featured Image' form within the Divi module selection.

Similar to when we added the featured to the single layout we will be enabling the 'Current Post' option to display the featured image for the Author.

CPT-R Featured Image Module Settings Content Design Advanced Main Settings Current Post Feature Image: YES Enable to this option to get the get the featured image for the current post. ***Enable this option for			
Content	Design	Advanced	
Main Setting	gs		
Current Post Fe Image:	eature E si	YES	
Hyperlink Imag	e:	YES inable this option to turn the featured image into a hyperlink to the linked post.	
Image Size:	P	medium 🗘	
Sa	ve & Add To Li	ibrary 💿 Save & Exit	

To display the books by the author select the 'CPT-R Linked Posts' module. This will loop over all of the current posts linked posts from the relationship selected and display each post within the layout selected.

|--|

From the options below you can see we have selected our relationship 'Bookshop' and the post type we would like to display 'Books'.

The related books will be displayed within a list using our Book single (List) layout.

CPT-R Linked	CPT-R Linked Posts Module Settings					
Content	Design	Advanced				
Main Settings	5					
Title:	E	Books				
Relationship:	E	3ookshop 🗘				
Post Type:	P	oose the relationship you would like to use to lookup the linked posts.				
Loop Layout:	Ch	Book Single (List)				
Lavout:	Ch	oose the layout you would like to use as the single template for the posts.				
uarter - 2000 a000	Το	ggle between the various blog layout types.				
Show Pagination	e & Add To Lik	vres Save & Exit				

Your author layout should now look like the following layout.

D The Divi Builder			¢↓	≡	~
Save to Library Load Layout Clear Layout			5	C	5
CPT-R Featured Image Insert Module(s) Add Row Standard Section Fullwidth Section Specialty Section Add From Library	Text X	CPT-R Linked Posts Insert Module(s)	;	X	

The finished layout should look like the following.

Ddivi	Hom	Authors	Books	Q

George RR Martin

Sed porttitor lectus nibh. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Curabitur arcu erat, accumsan id imperdiet et, porttitor at sem.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Vivamus suscipit tortor eget felis porttitor volutpat. Vivamus suscipit tortor eget felis porttitor volutpat.

Cras ultricies ligula sed magna dictum porta. Sed porttitor lectus nibh. Curabitur arcu erat, accumsan id imperdiet et, porttitor at sem.

Books

A Storm of Swords – Part 1

A Clash of Kings

A Game of Thrones

Please note: If your layout is squashed together please use the following CSS snippet where **writer** is your post slug.

```
.single-writer #et-boc .et_pb_row {
width: 100% !important;
```

}

Once you are happy with the authors layout save it to your library so it can be applied to all of your authors.

Book Layout

Enable the divi builder for one of your books.

Add the featured image to the Book page just like we did for the author layout.

		E 🖵 CPT-R Featured Image 🗙	= 9	Text	×
	≡ ×	+ Insert Module(s)	+ Insert Module(s)		
×	+ Add	Row			

Next we will be displaying the authors name and featured image as well as other books by the author.

Add a two columns section $(\frac{1}{2} \frac{1}{2})$

	□ = ×	CPT-R Featured Image X Insert Module(s)	+ Insert Module(s)	Text	×
		+ Insert Module(s)		Insert Module(s)	
×	+ Add	Row			

Add the 'CPT-R Post Title' module to the first column. Because we are displaying the title of the linked post (the author) we will not enable the current post option. Instead select the relationship you would like to used to lookup the linked post and click save.

CPT-R Post	Title Mod	ule Settings		×
Content	Design	Advanced		
Main Settin	gs

George RR Martin

Please note: If your layout is squashed together please use the following CSS snippet where **book** is your post slug.

.single-book #et-boc .et_pb_row { width: 100% !important;

}

Next let's display a grid of other books by the author.

Within the second column add the 'CPT-R Related Posts' module. This will loop over all of the posts within the linked posts. For our example it will loop over all of the books within the author for the selected book.

E CPT-F	R Related	Posts	
	od Docto M	adula Cattiage

George RR Martin

A Storm of Swords – Part

A Clash of Kings

Once you are happy with the books layout save it to your library so it can be applied to all of your books.

1

Shortcodes

Linked Post Title

If you would like to dynamically display the linked posts post title within your layout you can use the **[cptr_linked_post_title id=""]** shortcode.

The **cptr_linked_post_title** shortcodes take 1 parameter which is the relationship id of the relationship you would like to look up.

Going back to our example we may want to add a title above our other books called 'Other books by {the authors name}

Todo this add a text module above the CPT-R Related Posts Module and add the shortcode with your relationship id.

Text Modu	le Settings			×
Content	Design	Advanced		
Text				
Content:	A		Visual	ext
Heading 2	- B <i>I</i> ≔ ⊨	« = = = / × = ≝ ‼ = = ≙		CAL
Other I	books by [c	otr_linked_post_title id="cptr_writer_	_book"]	Ø
Here you can creat	e the content that will b	e used within the module.		

When you view the book you will see the title has been added with the authors name.
