

DIVI EASY TEMPLATES

USER MANUAL

VERSION 1 // MAY 2019

THE 404 PAGE

Simply modify the content of the "DET 404" page with the *Divi Builder* (in front-end or back-end depending on your preference). Insert the modules of your choice to create the design you want, then save.

You now have a tailor-made 404 page fully operational!

ⓘ Note that this is the "real" 404 page and not a redirection, as unfortunately many plugins that create 404 pages do (a penalizing practice for the SEO of a site).

THE BLOG POST PAGE 1/3

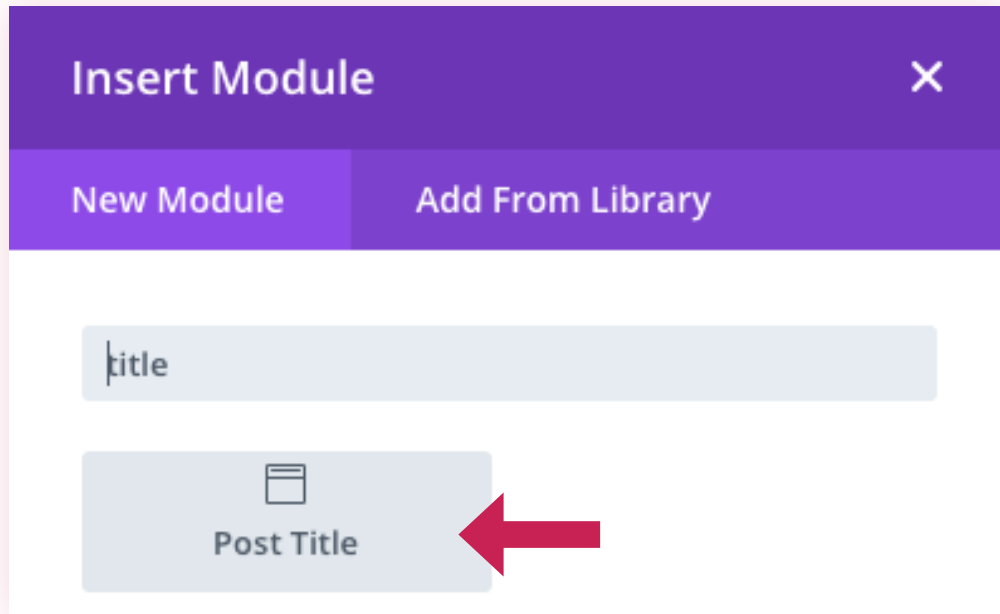

A screenshot of the WordPress dashboard. The left sidebar shows the navigation menu with "Divi Easy Templates" highlighted in blue. The main content area shows the "Divi Easy Templates" page list. The list includes a "Title" row, three rows for "DET 404 — Divi", "DET project — Divi", and "DET single — Divi", and another "Title" row. A red arrow points to the "DET single — Divi" row. Above the list are controls for "Bulk Actions", "Apply", "All dates", and "Filter".

Divi Easy Templates	
All (3) Published (3)	
Bulk Actions	Apply
All dates	Filter
<input type="checkbox"/>	Title
<input type="checkbox"/>	DET 404 — Divi
<input type="checkbox"/>	DET project — Divi
<input type="checkbox"/>	DET single — Divi
<input type="checkbox"/>	Title

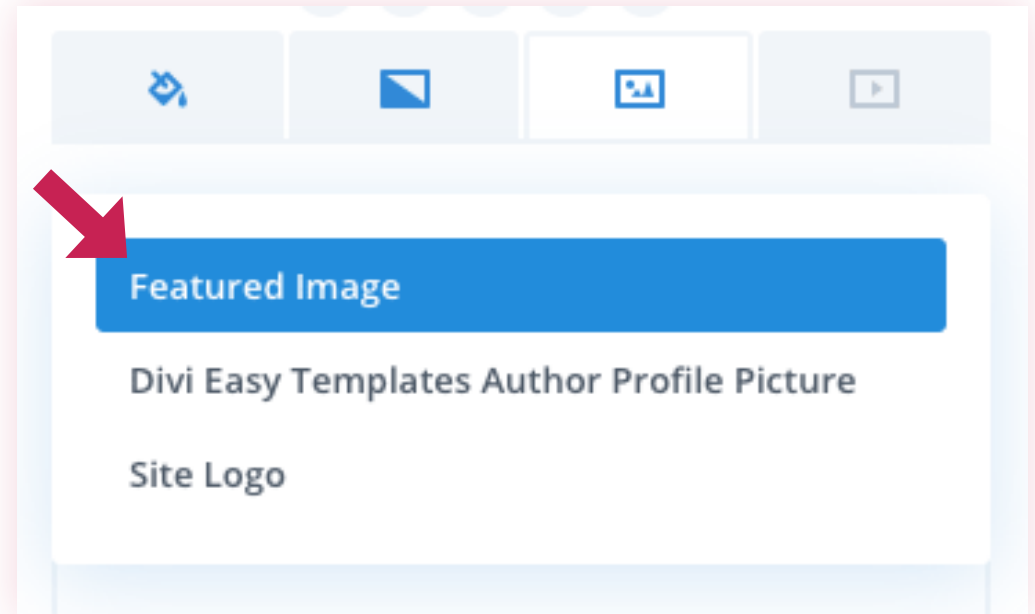

Modify the content of the "DET single" page with the *Divi Builder* (in front-end or back-end depending on your preference).

Insert the modules of your choice to create the design you want, then save.

THE BLOG POST PAGE 2/3

Use the "Post Title" module to display the various metadata of the post.

Use the dynamic content options of Divi to display the featured image of the post, either as background image or in an "Image" module.

THE BLOG POST PAGE 3/3

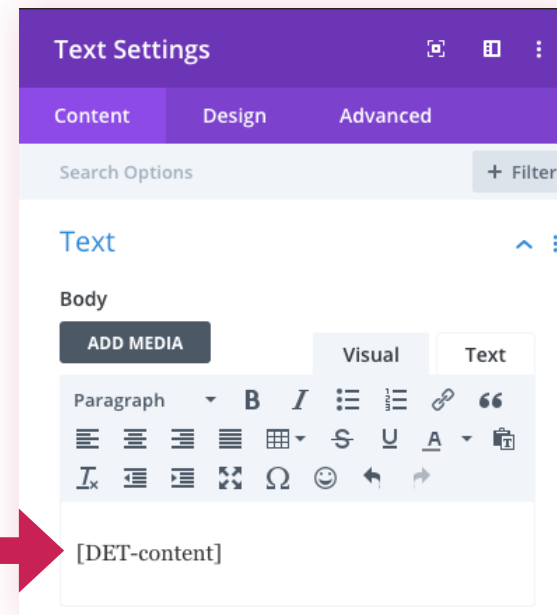

Depending on your needs, you can add a "Sidebar" and a "Comments" module.

You must of course insert a "Text" module that will display the content of your posts.

⚠ IMPORTANT

Add the `[DET-content]` shortcode to get the post content.

TIP

To see what you are doing while working on your design, start by formatting your page with an image to replace the featured image and dummy text in the "Text" module. This will allow you to better style your different elements (levels of titles, etc.).

When you are happy with your design, you will be able to use the dynamic content and insert the shortcode for the post content.

THE PROJECT PAGE

A screenshot of the WordPress admin dashboard. The left sidebar shows the navigation menu with "Divi Easy Templates" highlighted in blue. The main content area shows the "Divi Easy Templates" page list. The list includes a "Bulk Actions" dropdown, an "Apply" button, and a "Filter" button. The list items are: "Title", "DET 404 — Divi", "DET project — Divi" (highlighted with a red arrow), "DET single — Divi", and "Title".

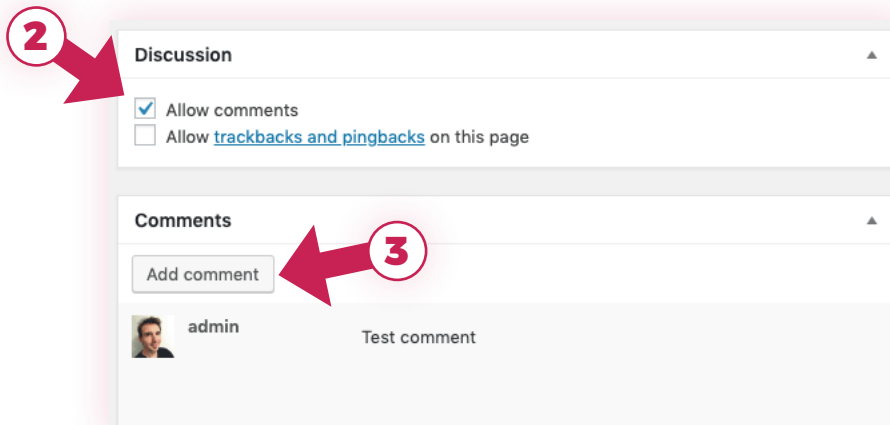

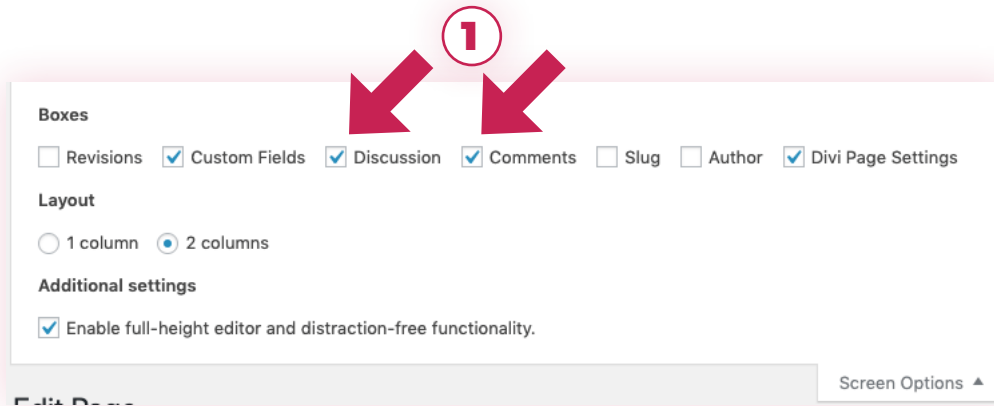

Divi Easy Templates	
All (3) Published (3)	
Bulk Actions	Apply
All dates	Filter
<input type="checkbox"/>	Title
<input type="checkbox"/>	DET 404 — Divi
<input type="checkbox"/>	DET project — Divi
<input type="checkbox"/>	DET single — Divi
<input type="checkbox"/>	Title

Modify the content of the "DET project" page with the *Divi Builder* (in front-end or back-end depending on your preference).

Insert the modules of your choice to create the design you want, then save.

The method is exactly the same as for blog posts.

MISCELLANEOUS 1/2

On the "DET single" and "DET project" pages, if you add a "Comments" module in the *Divi Builder* and want to preview it, edit your page in WordPress backend and:

- 1/ activate the "Discussion" and "Comments" metaboxes via the "Screen Options"
- 2/ Tick "Allow comments" in the "Discussion" metabox
- 3/ Add one or two comments to be able to style all the elements

As you may have noticed in screenshots, *Gutenberg* is inactive on the pages created by *Divi Easy Templates*.

MISCELLANEOUS 2/2

A screenshot of the "Custom Fields" metabox in WordPress. It has a table with two columns: "Name" and "Value". The "Name" column contains the text "My custom field". Below the table are two buttons: "Delete" and "Update". A red arrow points to the "Name" input field.

To add custom fields to your blog post or project templates:

1 / on your "DET single" or "DET project" page:

a / create a new custom field via the "Custom Fields" metabox

b / open the *Divi Builder* and select your custom field in the dynamic content options of Divi to insert it where you want

3 / on your posts or projects:

a / in the "Custom Fields" metabox, select the name of your custom field

b / add a value

A screenshot of the "QUICK EDIT" metabox in WordPress. It contains several fields: "Title" (DET project), "Slug" (det-project), "Date" (05-May 28, 2019 @ 08:40), and "Password" (with a "Private" checkbox). There is also a "Status" dropdown menu set to "Draft". A red arrow points to the "Status" dropdown.

Don't use one or more pages of *Divi Easy Templates*?

Simply change the status of the concerned page(s) to "Draft" to disable them.

 Don't worry, the page templates created by *Divi Easy Templates* will not be indexed by search engines.
