How To Import Divi Layout:-

Steps for importing layout:

- 1. Open WordPress Dashboard -> Activate Divi Parent Theme->Start By DownloadingZip File and Xml File
- 2. Unzip files and you will find one copy of each ie XML File(media.xml, post.xml, project.xml), Layout JSON File, and CSS File.
- 3. Import post xml / media xml file only in our case under Tools -> Import -> WordPress Import
- 4. Import Layout (.json) file under Divi -> Divi Library -> Import & Export Button

Further Explaination :-

- For ' Provided Product Zip ' we have created 'JSON ' file for each version that you can import via Page / Library both.

That is you can find 2 folders in Zip folder as A.Library JSON B. Page JSON.

- In Each folder you will find JSON files for each version. You need import one version at a time to make

it work ie for example if you want to load' Example V1' you need import Example V1 Library.JSON ' as mentioned in the step 4.

- Similarly you can import all Blog Version's Individually both ways ie via Page / Library
