Minimum requirements:

WordPress Version: 5.2.0 +

PHP Version : 7.2.x+

MySQL Version : 5.7.x+

<https://wordpress.org/about/requirements/>

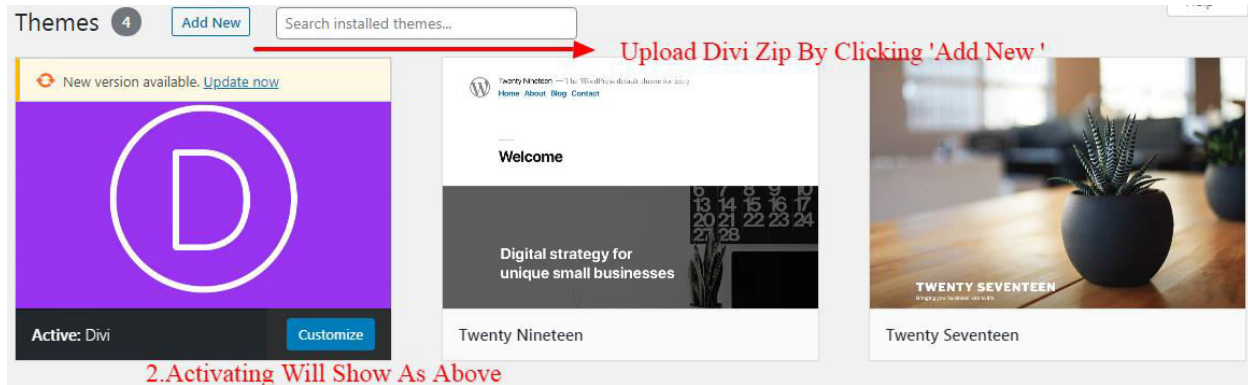

Zip upload installation method :

make sure uploads up to 2MB are allowed for your hosting

How To Import Divi Layout :-

Steps for importing layout:

1. Open WordPress Dashboard -> Activate Divi Parent Theme by uploading ` Divi ` Zip under -> **Appearance -> Themes -> Click ` Add New ` at Top -> Upload -> Activate Divi .**

Start By Downloading ` **Product Zip File and Supplementary files** `

Upon purchasing this layout pack, you will receive a ` **Product Zip File** ` containing **1 .json file each** and **2 .txt file** with Information and License.

` **Supplementary Zip** ` will include supporting document like ` Installation Guide Files ` (In some layouts we included XML files too if in-case you need import dummy data or else not needed)

2. Import product ` **Library Layout (.json) File** ` under **Divi -> Divi Library -> Import & Export** or can import JSON via ` **Page** ` using ` **Page Layout(.json)** ` as per the screenshot provided in the **step 5**

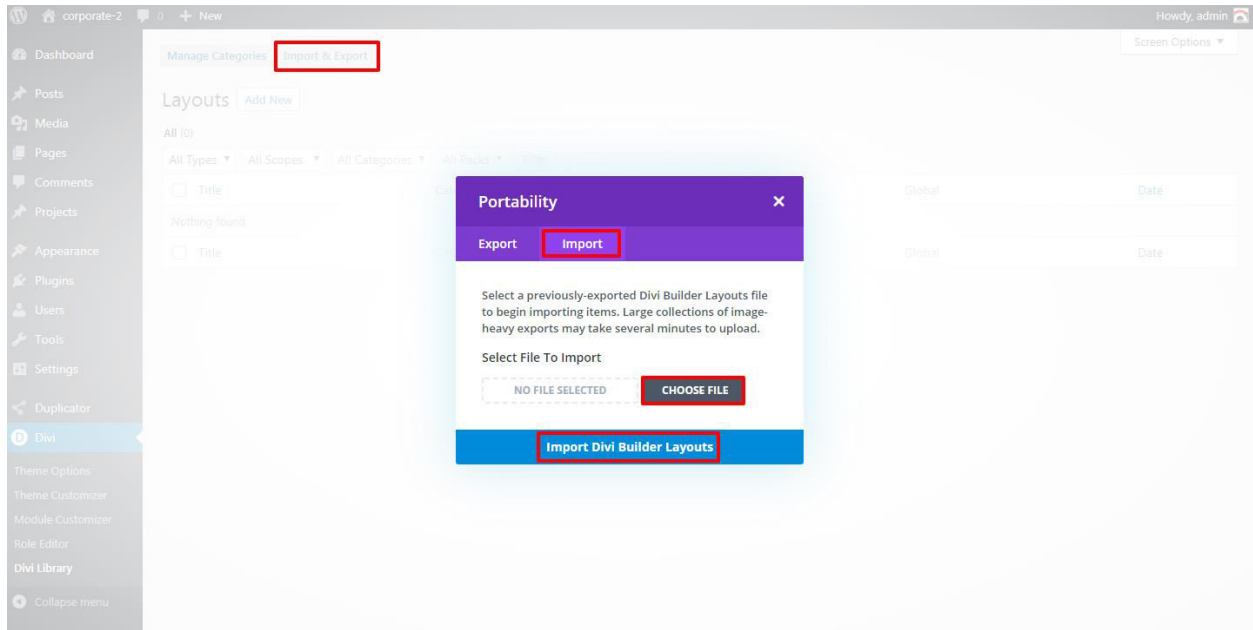

Further Explanation :-

– For ` **Provided Product Zip** ` we have created ` **JSON** ` file for each version that you can import via Page / Library both.

That is you can find 2 JSON in Zip ie A.Library JSON B. Page JSON.

– You need import one version at a time to make it work ie for example if you want to load ` **Example V1** ` you need import ` **Example V1 Library.JSON**

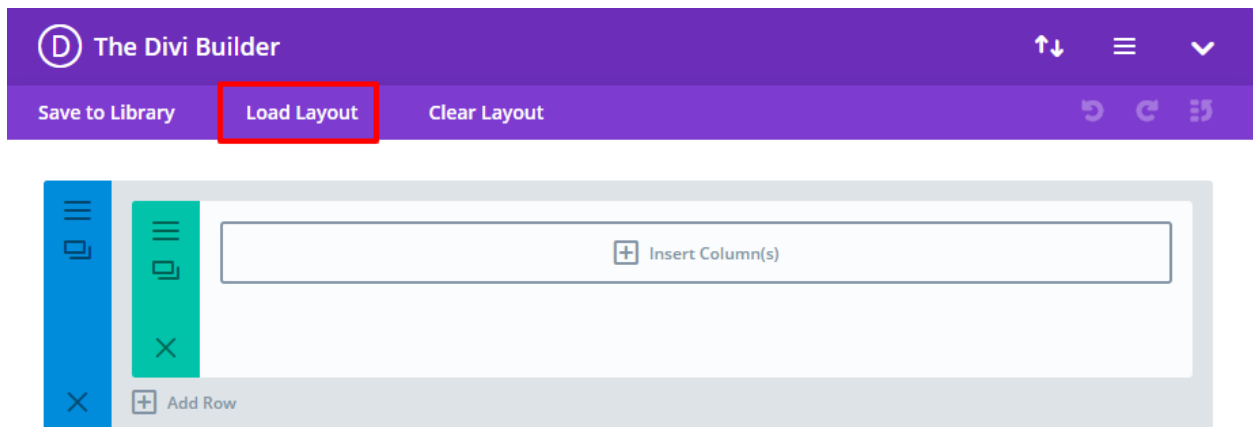

– Similarly you can import all Version's Individually both ways ie via ` **Page / Library** `

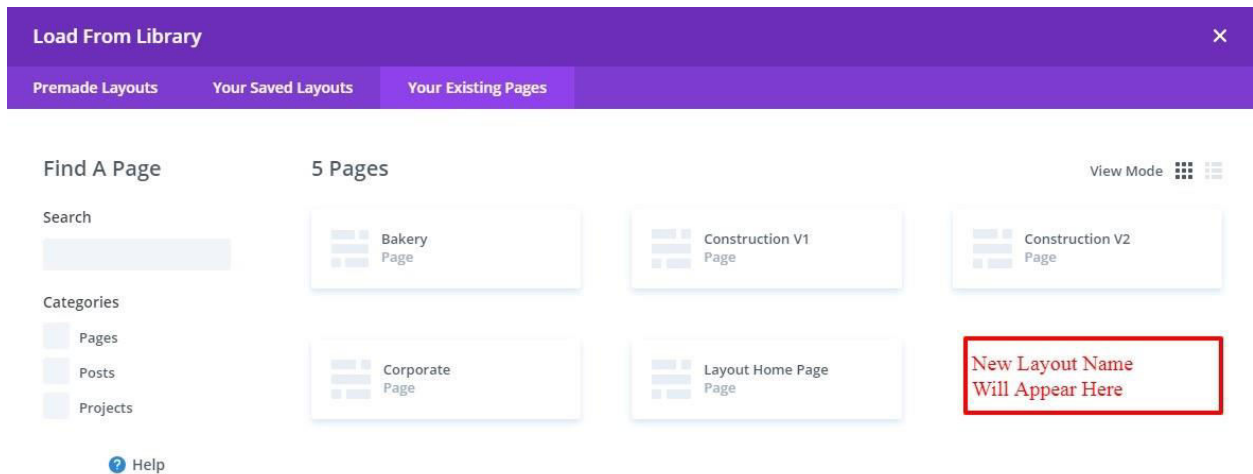

3. After importing JSON files ` **Go To - > Divi - > Divi Library** ` and you will see layout you imported like below:

<input type="checkbox"/> Title	Categories	Type	Global	Date
Nothing found	<i>Divi Layout - your layout name will appear here</i>			
<input type="checkbox"/> Title	Categories	Type	Global	Date

4. Add New Page (In WordPress Admin - > Go To Pages -> Add New) and Click on " **Load Layout** " and select one that you want to import from the list

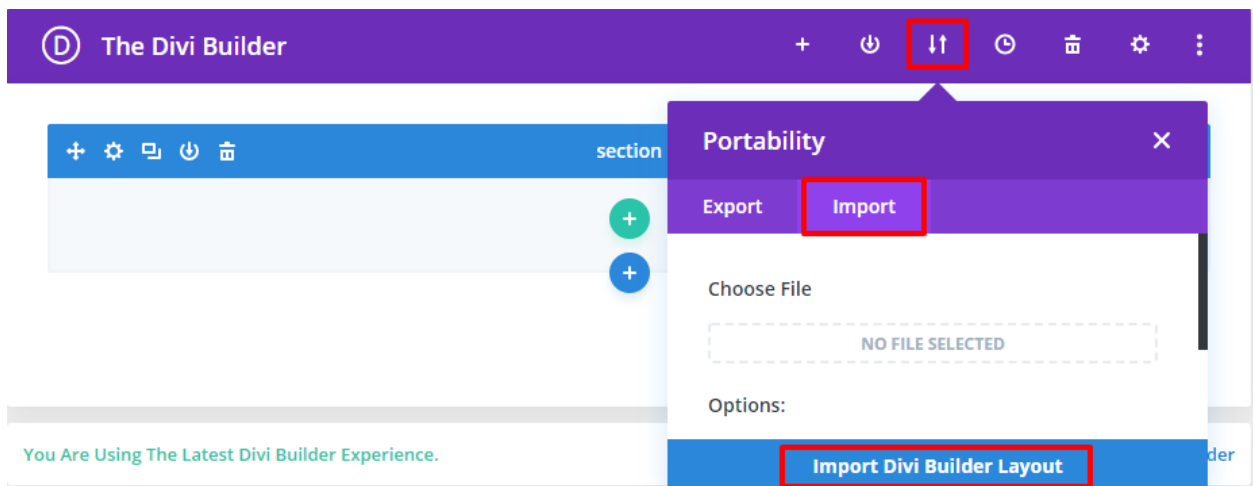

5. After selecting the layout ` **Publish Page** ` and see at the front end

OR

If you face any issue during loading then you can upload JSON ` **Via Page** ` as per screenshot below.

Optional Step:

If there is ' **XML** ' files provided in the supplementary Zip folder ie ' **(Post, Project, and Media XML)** ' it is just in-case you need to ' **load dummy data** ' on your site else you do not need to import ' **XML** ' files at all.

For ' **XML** ' files you need to import it under **Tools -> Import -> WordPress Import** (You can ' **skip this step** ' if there is no XML files provided or your site already have ' **Posts / Projects** ' added in the WordPress Admin)
