DIVITHEMECENTER

Installation Guide Layout Bundle

http://divilayouts.divithemecenter.com/installation-guide-layout-bundle/

Requirements:

In order to successfully run **' Our Divi Layouts '** on your website your server environment will have to meet certain PHP and Wordpress minimal version requirements..

Essentials:

-PHP 5.4.X or higher

-In order to install our Child theme or Layouts, you must first Purchase **Elegant themes Membership** and Download **Divi theme.**

-This Divi Layouts is fully compatible with **Divi v4+**, just make sure that you've installed the latest version of Divi theme. Some features may not work correctly if the Divi theme version is less than **v4.3.2.**
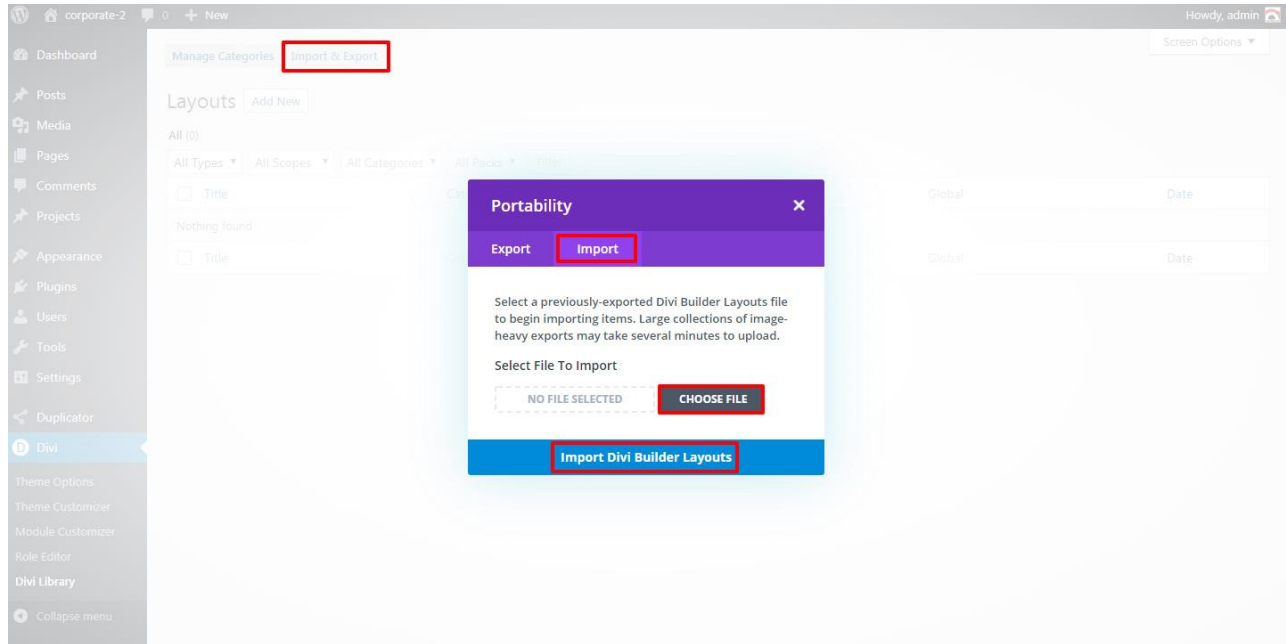

Installation Documentation:

Files With The Product:

After you have Un-zip the file you will see all styles library json as well as sub-folder with all styles sections json like for example as **" individual styles sections json "**

A. Library Import Installation Steps For Importing Page:
Steps:

1. Make sure you have the latest " **Divi Theme installed** " and activated

2. Import product ' **Library Layout (.json) File** ' under ' **Divi -> Divi Library -> Click Import & Export**
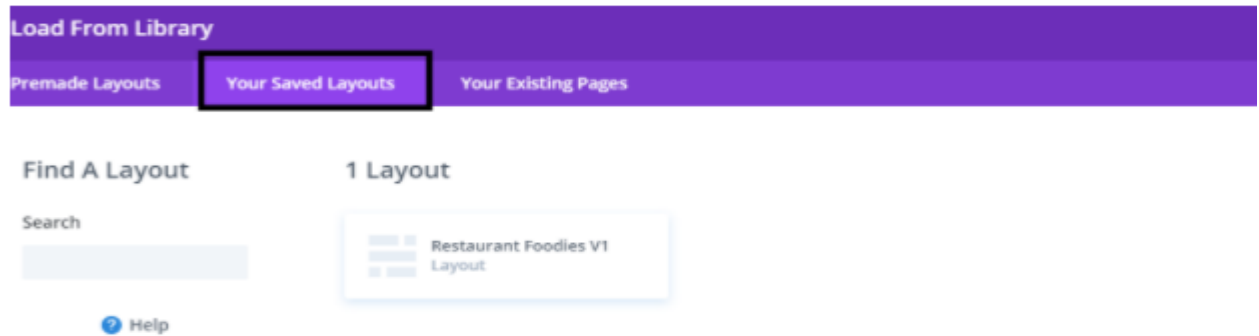

3 After importing JSON files ' **Go To – > Divi Library** ' and you will see layout you imported like Below

Title	Categories	Type	Global	Date
Nothing found	← Divi Layout - your layout name will appear here			
Title	Categories	Type	Global	Date

4 Go to Pages → Add New and give your page a title

→ Click on Use ' **The Divi Builder** '

→ Click on ' **+** ' Icon -> Go To " **Your Saved Layouts** "

Select one that you want to load on your page and import.

5. After selecting the layout ' **Publish Page** ' and see at the front end.

6. Wait until the layout is imported (it can take up to several minutes) Don't forget to publish/save your page.

7. All icons and images will be automatically imported with the .json file

CSS Code:

The code or text module with CSS code is used in the layout and you will find all ' **CSS** ' code in this module only.

Products' Images :

For the best experience, I recommend using product images with transparent background in PNG format.

B. Steps For Applying / Adding Individual Section JSON like " Team_Style 1_Section.json " :
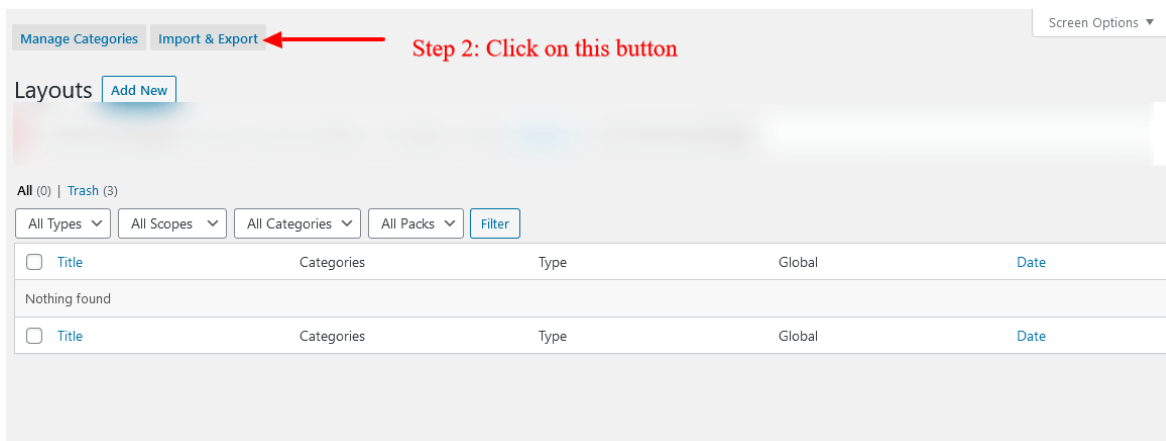

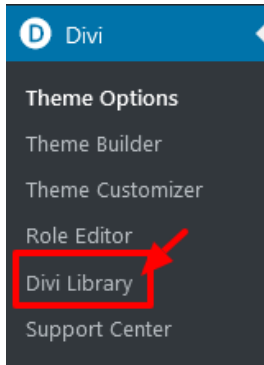

Any Layout Section Styles Can Be Imported In Similar Fashion As Needed & LikeWise : –

After you have Un-zip the file you will see all styles library json as well as sub-folder with all styles sections json like for example as " individual styles sections json "
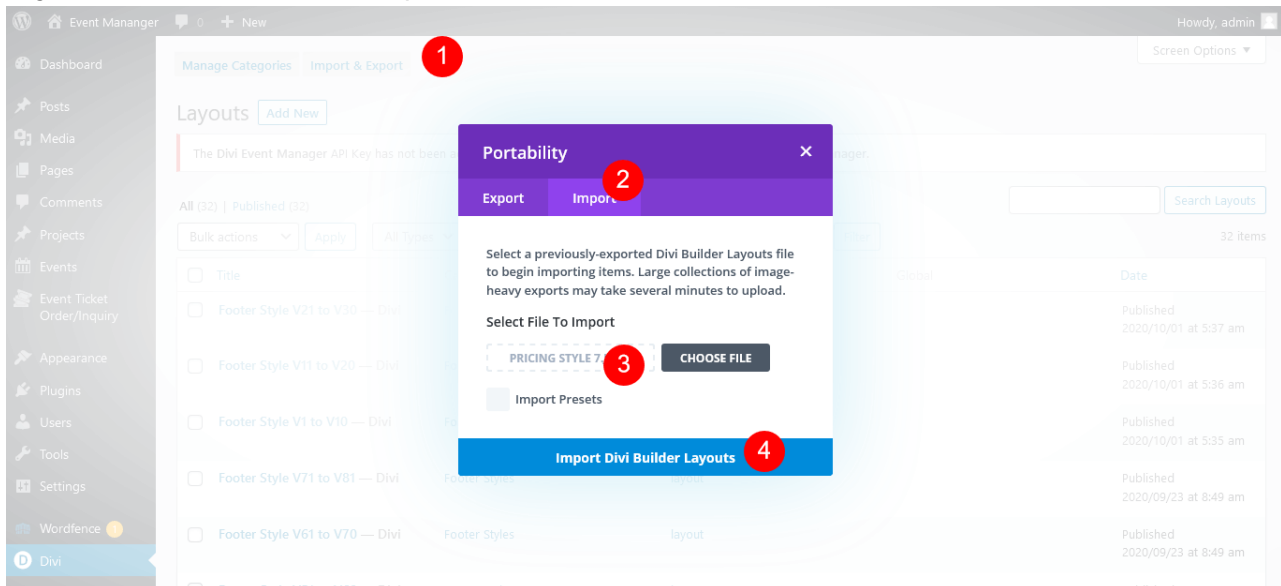

Below we have taken example of our ' Team Layout ' likewise you can follow same for our all other layouts sections available in the ' Layout Bundle '. If section is not applicable will not provide and only library json is available.

## Steps:

1   Make sure you have the latest " **Divi Theme installed** " and activated

2. **Go to Dashboard –> Divi -> Divi Library -> Click Import & Export**

3   select **"Import"** Tab & select any individual section style json for example ' **Flip Box Layout Style1_Section** ' & click on import button
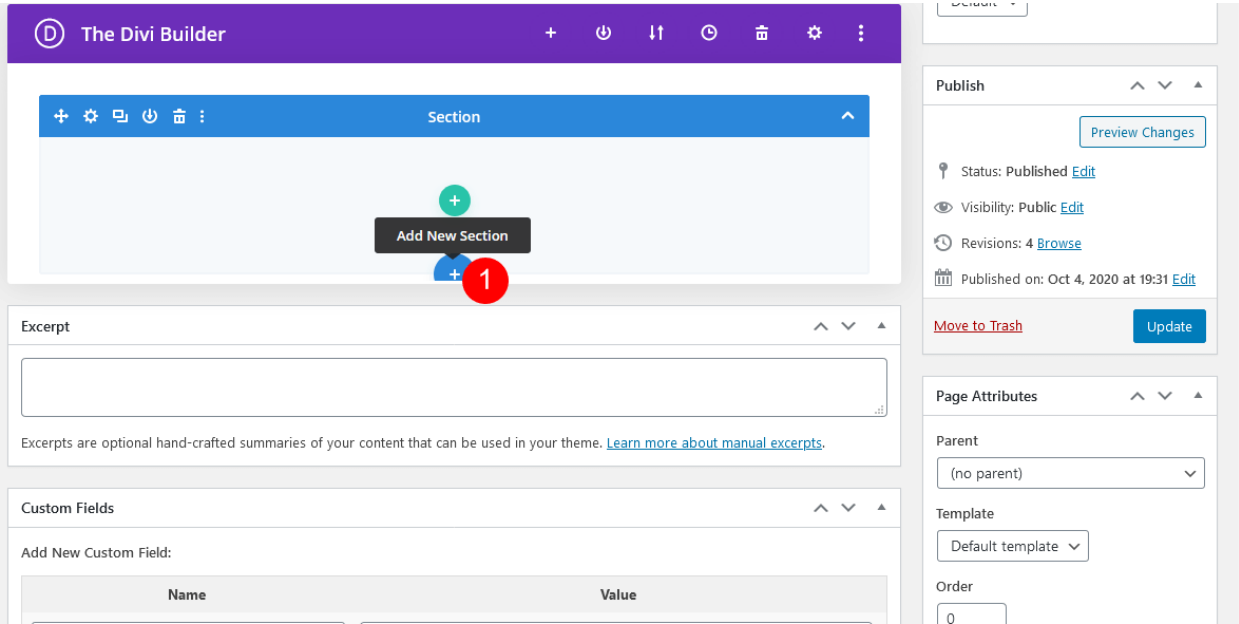

4   After importing JSON files **' Go To – > Divi Library '** and you will see layout you imported like below

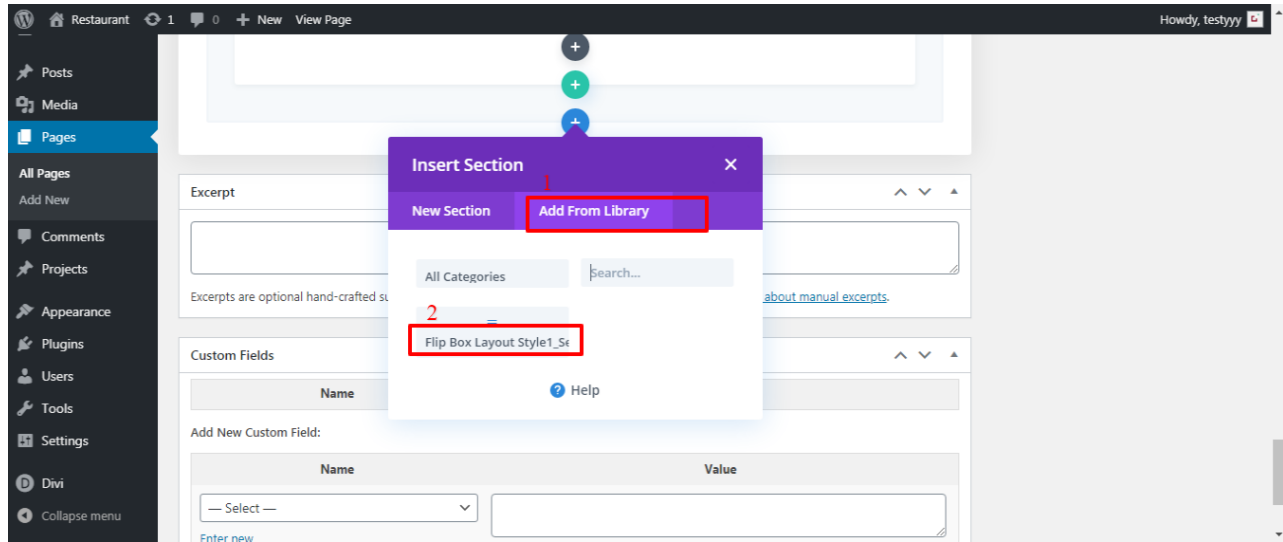

5. **Go to Pages**

→ Click on Use The **' Divi Builder '**

→ Click on add new section **' + '** Icon in **' Backend Builder '** for adding ' new section ' -> Go To " Your Saved Layouts "

-> After clicking on icon you can see all imported Individual section styles saved in library

-> Select one you want to import and click to import section on the page

6. After selecting the layout ' **Publish Page** ' and see at the front end.

-> Wait until the layout is imported (it can take up to several minutes) Don't forget to publish/save your page.

-> All icons and images will be automatically imported with the .json file.
