

LIBRARY GUIDE ALL IN ONE IMPORT

Visit : <https://divilayouts.divithemecenter.com/library-guide-all-in-one-import/>

Author: Divi Theme Center

Requirements:

In order to successfully run ‘ Our Divi Layouts ‘ on your website your server environment will have to meet certain PHP and WordPress minimal version requirements.

Essentials:

→ PHP 5.4.X or higher

→ In order to install our Child Theme or Layouts, you must first Purchase [Elegant Themes Membership](#) and Download [Divi Theme](#).

→ This Divi Layouts is fully compatible with Divi v4+, just make sure that you’ve installed the latest version of Divi theme. Some features may not work correctly if the Divi theme version is less than v4.3.2.

Files With Product:

→ After you have Un-zip the file you will see all styles library json ie for example ” **All_Styles_Library** “ will include all styles JSON in one file that you can import in ‘ **Divi Library** ‘ . We have also provided ‘ **Individual Style Library JSON** ‘ files in sub folder to import it individually.

→ ‘ **Supplementary Zip** ‘ will include supporting document like [‘ **Installation Guide Files** ‘]

Steps:

1. Make sure you have the latest “ **Divi Theme installed** “ and activated
2. Import product ‘ **Library Layout (.json) File** ‘ under ‘ **Divi -> Divi Library -> Click Import & Export**

Use ” **All_Styles_Library_Json** “ if you want to import all styles in one shot under ‘ **Divi Library** ‘ else use individual style Json files .

3. After importing JSON files ‘ **Go To – > Divi Library** ‘ and you will see layout you imported like below:

<input type="checkbox"/> Title	Categories	Type	Global	Date
Nothing found	← <i>Divi Layout - your layout name will appear here</i>			
<input type="checkbox"/> Title	Categories	Type	Global	Date

4. Go to Pages → Add New and give your page a title
→ Click on Use ‘ **The Divi Builder** ‘

→ Click on ‘ + ’ Icon -> Go To “ **Your Saved Layouts** ”

Select one that you want to load on your page and import.

5. After selecting the layout ‘ **Publish Page** ’ and see at the front end.
6. Wait until the layout is imported (it can take up to several minutes) Don’t forget to publish/save your page.
7. All icons and images will be automatically imported with the .json file
8. If you have purchased any blog layout like for example ‘ **Bloggging Blog Layout Bundle** ’ it does not contain any demo blog posts. Please use your own blog posts ! Or you need apply ‘ **Optional Step** ’ to load ‘ **Dummy Posts** ’

Skip the step if not required .

Optional Step:

Note:

One who have purchased the ‘ **Product** ’ from ‘ [Elegant Themes](#) ’ might not have ‘ XML ’ files in the Zip and need to use their own ‘ **Demo Blog Posts** ’ .

If you are importing ‘ **Blog Layout Version** ’ on the fresh divi installation you might need import ‘ **Post / Media XML** ’ ie you need import / load ‘ **Dummy Blog Posts** ’ on your website. You can find ‘ **XML** ’ under ‘ **Supplementary Zip** ’ .

For 'XML' files you need to import it under **Tools -> Import -> WordPress Import**. You can 'skip this step' if your site already have 'Posts' added or loaded in WordPress Admin under "All Posts" .

Tutorial:

<https://www.elegantthemes.com/documentation/divi/library-import/>

CSS Code:

The code or text module with CSS code is used in the layout and you will find all 'CSS' code in this module only.

Products' Images :

For the best experience, I recommend using product images with transparent background in PNG format.
